Q1 2020 Industry Highlights

- The unprecedented stop in the world's economic activity has sent shockwaves through the entire Aluminium supply-chain. A quarter of the world population live under lockdown. The Aluminium downstream has lowered output levels or has already shutdown. The auto sector has taken the hardest hit from novel COVID-19 outbreak; other sectors have also witnessed a sharp decline thanks to the closure of extruders, rolling-mills and construction facilities.
 - **World Consumption down by 8% YoY;**
 - Aluminium demand collapse in major markets: a drop of 10% YoY in Europe and China, 8% YoY in MENA and 6% YoY in North America.
- **Global Production** witnessed a **modest growth of 2% YoY**. Primary Aluminium production in MENA continues - up 12% YoY [mainly on the back of Alba's Line 6 metal]. Production in North America up by 5% YoY mainly due to higher throughput from Canadian smelters. China production up by 2% YoY [high-cost smelters curtailed their output thanks to drop in SHFE price]. This has led the world market to be in surplus with China (+1,923Kt) and (+299Kt) without China.
- LME inventories at **~1.164 million MT** as of March-end (**up by 4% YoY**). LME-Cash averaged US\$1,690/t (down by 9% YoY) and the Physical premium prices are under downward pressure.
